Battery Cover

Begin to Use

(U)SIM Card and Battery

When you reserve to access to the communication network services, you will receive a phone-inserted subscriber identity module (abbreviated as (U)SIM card), which contains the information of the network services booked by you, your personal identity number (PIN) and the available network service info.

Please consult with your SIM card provider, network service provider or network operator to obtain and use SIM-based information.

You can purchase and use the universal subscriber identity module (referred to as USIM card) if desired to obtain more 3G network service.

Insert (U)SIM Card and Battery

Please power off the phone in order and ensure the adapter disconnected with the phone before remove the battery.

1.   With the phone back upward, slightly press and push the rear cover toward the phone bottom till the cover is removed.
2.   Remove the battery.
3.   Push away the (U)SIM card in socket with golden wafer downwards.
4.   Install the battery.
5.   Please phone back cover to push back in situ.

Recharge Battery

When the battery capacity is low, the phone will send out the low power information. Under this case, you are supposed not to use some functions of the phone.

When the power is lower than the threshold value, the phone will be power off automatically. Please recharge the battery.

When the phone is power-on and being charged, the flickering battey icon is displayed on the top-right corner of the screen. After charging finished, the prompt of charge finished is displayed on the top-right corner of the screen. When the phone is power-off and being charged, the charging status picture is displayed on the screen; after charging finsihed, the prompt of charge finished is displayed on the screen.It takes about 2.5 hours to charge the battery.

1.   Insert charge connector into the phone.
2.   Draw out the charge connector after charge finished.

Start up and Close the Phone

Before the phone is started up, please firstly reaffirm that the phone is charged and the (U)SIM card is inserted in the phone.

When the phone is started up without (U)SIM card inserted, the window will display the information of inserting the (U)SIM card. The phone only supports the function of emergent call under this status. You can input the emergent phone number and dial out by clicking ［Call Key］.

The phone supports the startup function under charge status. It can be activated when the phone displays power-on info.

After the phone power-off automatically due to low power.

Start up the Phone

1.   Press and hold ［On/Off Key］ continuously.
2.   Please input the phone lock password/PIN lock password if an inquiry about password is displayed on the screen, and then click ［Central Key］ to confirm.
3.   If you use the phone for the first time, the screen displays the default standby menu while leaving the factory, and the screen will display your

recently standby menu if you use at the second time.

4. If desired to set up the phone, please consult <Begin to Use-Set up Your Phone > for more details.

 After the phone is launched, it will identify the (U)SIM card supplier automatically, and finish setting up the SMS and wireless network parameters. If the phone does not configure the correlative parameters automatically, please consult the service supplier for the correct parameters and finish the setting.

Close Phone

1. Press and hold ［On/Off Key］ last for 4 seconds.

2. Enter into the close status after the powering-off animation is displayed on the screen.

 Other functions are disabled except for alarm after the phone powered off.

Link Function

The phone can be connected to other devices via the Bluetooth & wireless technology and USB transmission line.

The message received from an uncertain source in any way will be harmful to your phone or PC.

In order to secure the phone, please: close the Bluetooth function at ordinary time; be vigilant against receiving undiscerned Bluetooth files or MMS; do not install the undiscerned equipment program; and download the ringtone or games from the reliable websites.

Bluetooth & Wireless Link

You can link to other compatible devices wirelessly with the Bluetooth & wireless technology. The compatible devices include possibly the handsets, PC, and earphones and so on.

Please confirm whether the Bluetooth & wireless technology are permitted

to use according to local regulations or laws. If not allow to use the Bluetooth technology, please turn off the Bluetooth function.

It is suggested that the device to be linked is beside of a 10m range without any barrier of solid objects.

The maximum tolerable data traffic of Bluetooth devices for the phone will be adjusted according to the local regulations automatically. Thus the upper limit of the clearance for the Bluetooth device will be deviated from each other probably.

Bluetooth Link
1. Main menu >Settings > Connection Settings > Bluetooth.
2. Select "Turn on" to activate the Bluetooth function.
3. Select "Settings" to open the Bluetooth entry list.
4. Switch to set up the visibility of local phone and dial up to get on line, and input the name of local phone, click "Save" to reserve the Bluetooth settings.

7. Select the Bluetooth device you required when at inquiry about the matched password, input the matched password value.
8. If the input password is matched to that of the Bluetooth device to be linked, the phone will link to the Bluetooth device.

Transmit Data via Bluetooth
1. Open an application program storing the files, for example, opens My stuff if desired to send pictures to an object device, select the file you required to send.
2. Click "Option" to select "Send" and select "Via Bluetooth".
3. The phone will display the device list, you can click Bluetooth device which required to be connected.
4. If the object device demands a matched password, the phone will prompt

to input the matched password. Please input it.

5. After linked, the phone will display a prompt of Sending File.

Match to Device

The requirement for matching signifies the identity authentification. In order to achieve the matching requirement, the subscribers of both phones backing the Bluetooth& wireless technology must agree upon a co-used password and input an identical password on both devices.

1. Before matching, please create your own password (1 to 6 digits) and negotiate to use an identical password with the object device.

2. The device will display in the screen within the effective scope by using "Search", select a device to be linked and input a matched password. If the password is matched successfully, the device will be recorded in the device list.

3. You can set up the successfully matched device as authorized device. Therefore, the phone will connect the device automatically.

- Rename: rename the current file.
- New folder: create the new folder in the current folder.
- View mode: set up to array the files by list/abbreviatory image.
- Details: display the current detailed message of the file, including name, mode, type, time creation, size, position and file protection.
- Memory status: view the phone and occupied status of external memorizer.

Calendar

You can save the To-Do List, Rendezvous, Memorial Day and Memo.

The phone will timely remind you of the related events, assisting for you to manage your routines.

If desired to enter into calendar menu, please select [Central Key] under the standby status, then enter into the main functional menu to select < Calendar >.

After you enter into the calendar window, the present date will prominently display in the calendar month view.

Option Menu of Calendar Status:

- New event: create an event in a selected date.
- Week view: view the specific routine in the week.

- Delete：Delete the event in a select date
- To certain day: skip to a designated date.
- Settings: set up alarm ringtones for different types of events, and set up the parameter for Week View including the date and name of Week View.
- Expired Event: display all outdated event logs.

Event Recording Entry

Create Event

1. Operation path: Main menu > Calendar.
2. Select newly-built event's date in calendar, click ［Central Key］ to enter into the event management list in the present day.
3. Click "Option" to select "New event".
4. You can input the event message such as title, type, summary, address, start date, start time, end date, end time, alarm, (alarm ringtone) repeat cycle etc. in calendar setting.
5. After finishing setting, click "Save" to save the message.

Delete Event

1. Operation path: Main menu > Calendar.
2. Select date in calendar, click ［Central Key］ to enter into the event management list in the present day.
3. Click "Option" to select "Delete", and then select the deletion mode and click "Ok".
4. If selecting batch deletion mode, you can click ［Central Key］ to select the delete event and click "Option" to select "Delete", and then click "Ok".

Option Menu of Present Event Management List:

- New event: create an event in a present date.
- Delete: delete the current or delete a batch files.
- To certain day: skip to the event management list window of designated date.

View Calendar

View Events in Designated Date

1. Operation path: Main menu > Calendar.
2. Click "Option" menu to select "To certain day", click "Ok'.
3. After inputting the date, click "Ok".

Week View

1. Operation path: Main menu > Calendar.
2. Click "Option" to select "Week view", click "Ok'.
3. If there is an event log in a time interval, the week view will prominently display the time interval.

Outdated Event

1. Operation path: Main menu > Calendar.
2. Click "Option" to select "Expired event" and click "Ok".
3. Click "Option" to view the detailed event info.

Call Log

You can view the number of outgoing calls, incoming calls, missed calls and relevant message by viewing the call log.

If you need to enter into the menu of call log, please click ［Central Key］ under the standby status, enter into the main functional menu to select <Call Log>.

Missed calls: display the list of recently missed calls.

Outgoing calls: display the list of recently outgoing calls.

Incoming calls: display the list of recently incoming calls.

All Calls: display all call records including missed calls, outgoing calls, incoming calls and call log.

Data transmition: display the volume of sent and received messages. If you want to recalculate data volume, please click "Reset".

Call duration: display recent call duration, all outgoing calls time, all incoming calls time. If you want to recalculate call duration, please click "Reset".

Call cost: display recent call cost and all call cost. You can set up toll

restriction, Rate standard or replacement.

Call Log

View Call Log

1. Operation path: Main menu > Call log > Missed calls/Outgoing calls/ Incoming calls/All calls.
2. View call log entries.

Save Record Number

1. Operation path: Main menu > Call log > Missed calls/Outgoing calls/ Incoming calls/All calls.
2. Select call log entry to open "Option", select "Save number", and then select save mode, click "Ok".
3. If as newly-added save mode, select the type of number, click "Ok" to input the other information of contact, click "Save".
4. If as updated save mode, select updated entry of contact, and then select number's type, you can edit other information of contact, click "Save".

Call Record Number

1. Operation path: Main menu > Call log > Missed calls/Outgoing calls/ Incoming calls/All calls.
2. Select call log entries.
3. Click ［Call Key］ to call the current number.

Option Menu in Record List:
- Edit and dial: you can edit and call again if displaying the recorded number of contact.
- Send message: send the SMS/MMS to the recorded contacts.
- Delete: delete the current/ delete all.
- Save number: add the message of recored contact to the Contacts.
- Set speed dial: set up the selected contact's number as speed dial number.
- Set reject call: set up the selected contact's number as filter

number.

- voice call: Users to establish voice call.
- video call: Users to set up video call.

View the Transmission Data Capacity

1. Operation path: Main menu > Call log > Data transmission.
2. Click "Reset" to re-set and recalculate the data capacity.

Review Call duration

1. Operation path: Main menu > Call log > Call duration.
2. Click "Reset" to reset and recalculate the call duration.

Settings

The settings function will help you customize the phone.

Do not revise the setting parameters provided by the network supplier.

If desired to enter into setting menu, please click the [central key] under the standby status to enter into the main functional menu and then select "Settings".

Parameter Value Setting

The general steps for setting parameter value.

1. Operation path: Main menu > Settings.
2. Select your required type of setting and select required setting of specific parameter items.
3. You can use the following operation method to set up the parameter value:
   - Use to launch or close a certain setting.
   - Click to select a certain parameter from the list.
   - Click to launch text editing window, then input character or number.
   - Increase or decrease the numerical value in the slide bar.
4. Click "Save" to save the parameter setting.
5. Click "Back" to return to the Previous.

Profile

You can set up personal ringtone and relevant prompt tone of the phone in different scenes.

1.　　Operation path: Main menu > Settings > Profile.
2.　　Select required Profile of setting, click to open the window of parameter setting.
3.　　Select your required type of setting to set up, after completing, click "Save" to save the setting value.
4.　　Click "Select" when the phone returns back to the Profile and then launch the Profile.

Items of Standard Mode Settings:

- Voice call ring: set up ringtone of voice incoming call.
- Video call ring: set up ringtone of video incoming call.
- Volume: set up the up and down of ringtone's volume.
- Message alert: set up prompt tone of message.
- Email alert: set up prompt tone of email.
- Vibrating alert: set up whether vibrating or not.
- Key tone: set up whether to launch the key tone or not.
- Warning tone: set up whether to launch the warning tone or not.

Items of Silent Mode Settings:

- Voice call ring: set up ringtone of voice incoming call.
- Video call ring: set up ringtone of video incoming call.
- Message alert: set up prompt tone of message.
- Email alert: set up prompt tone of E-mail.

Display Settings

Set up screen display parameters for the phone.

1.　　Operation path: Main menu > Settings > Display settings.
2.　　Select required type of setting, then click to open parameter setting window to set up.
3.　　After finishing setting, click "Save" to save the setting value.

Items of Display Settings:

- Idle screen: set up standby menu for the phone. It includes wallpaper and whether to display the time and date.
- Backlight time: set up the waiting time of screen light, including 5 seconds/10 seconds/20 seconds/ Always.
- Brightness: set up the brightness of display screen.

Phone Settings

Set up the language, time, date and shortcut of the phone.

1. Operation path: Main menu > Settings > Phone settings.
2. Select required type of setting, then click to open parameter setting window to set up.
3. After finishing setting, click "Save" to save the setting value.

Items of Phone Settings:

- Language: you can set up the displayed language of the phone.
- Time and date: set up reference time, date, displayed format of time, displayed format of date and summer time of the phone.
- Shortcuts: set up the displayed status and function of shortcut key.
- Move Sensor：Terminal support motion sensor function.

Call Settings

Set up the attribute parameter of call function.

1. Operation path: Main menu > Settings > Call settings.
2. Select required type of setting, then click to open parameter setting window to set up.
3. After finishing setting, click "Save" to save the setting value.

Items of Call Settings:

- Phone number: set up whether displaying the local phone number in the contactee's phone, and the sending local phone number requires the network support.
- Call waiting: set up whether answering the second incoming call under the call status of the phone.

- Answer mode: set up to receive the call by random key/receving key.
- Auto redial: set up whether continuing to dial if calling failure, this function supports at most 10 times automatic re-dial.
- Minute prompt: set up whether reminding 10 seconds prior to integral minute under the call status of the phone.
- Answer prompt: prompt the receiving function of the phone.
- Call divert: transfer the voice incoming call/video incoming call to another number or voice/video message box which you designated.
- Call barring: set up the preview of calling and receving, including to prohibit the phone from dialing out, restrict dialing international long-distance call, restrict dialing international long-distance outer domestic, restrict all incoming calls, restrict the incoming call during the international roam, cancel all call restriction. This feature requires the support of the local network provider.

Network Settings

Set up the connected network attribute of the phone and net-searching mode.

1. Operation path: Main menu > Settings > Network settings.
2. Select required type of setting, then click to open parameter setting window.
3. Click "Ok" to select your required type of setting and to set up.

Items of Network Settings:
- Network mode: set up the connected network mode of the Phone, including Auto, GSM and WCDMA.
- Search mode: set up the mode of network searching of the phone, including automatically and manually.
- Preferred network: Select the network band.

Security Settings

The unauthorized use of the phone will be prevented through management

of the phone and (U)SIM card passwords.

The phone and (U)SIM card passwords as well as PIN2 support 4-8 digits but not support other characters. The original lock password of the phone when leaving the factory is 0000, the (U)SIM card password and PIN2 are provided by the network operator.

If you input PIN/PIN2 wrongly in continually 3 times, your (U)SIM card will be locked.

If you want to unlock the locked (U)SIM card, you need to input personal unlock key (PUK/PUK2), which are provided by the network supplier.

If you input PUK wrongly in continually 10 times, your (U)SIM card will be discarded as useless permanently.

1.   Operation path: Main menu > Settings > Security Settings
2.   Select required type of setting, then click to open parameter setting window to set up.
3.   After finishing setting click "Save" to save the setting value.

Items of Safe Settings:

● Automatic keylock: Set up to launch or close the auto keyboard lock function. After launching the auto keyboard lock, it will lock the keyboard automatically after operating one minute without key pressing under the standby status of the phone to prevent dialing the number wrongly.

● Phone lock: set up to launch or close the function of phone lock. After launching the phone lock, you should input the password of phone lock at a time when you turn on the phone.

● PIN lock: set up to launch or close the function of PIN lock. After launching of PIN lock, you should input the password of PIN lock at a time when you turn on the phone.

● Change phone code: alter the password of phone lock.

● Change PIN: alter password of PIN.

● Change PIN2: alter password of PIN2.

Connection Settings

Parameter setting of Bluetooth and USB connecting and management of

data account.

Operation path: Main menu>Settings>Connection settings.

Items of Connection Settings:
- Bluetooth: activate or deactivate the Bluetooth function, search Bluetooth devices or set up Bluetooth parameters.
- Data account: Set up the parameter of data account.

Bluetooth Settings

Operation path: Main menu > Settings > Connection Settings > Bluetooth> Settings.

Items of Bluetooth Settings:
- ✓ Visibility: Aiming at other Bluetooth device to display or conceal the local phone.
- ✓ Device name: Input the name of local phone.

Bluetooth Connection
1. Operation path: Main menu > Settings > Connection Settings > Bluetooth>Turn on.
2. Operation path: Main menu > Settings > Connection Settings > Bluetooth>Devices.
3. Click "Search", searching a certain range of Bluetooth Device, and the divice name will be displayed on the device list if searching out Bluetooth device.
4. Select the device name of required connecting and click to match.
5. When the device enquires about the matched password, input a matched password value.
6. If the input matching password of the phone and the matching password of Bluetooth device to be connected are correct, then you can connect the Bluetooth.
7. You can click "Search" to search again if you do not inquire about the required Bluetooth device.

Data Account Settings

1. Operation path: Main menu > Setting >Connection Settings > Data Account.

2. Select a data account; click the ［Central Key］ to view the account info including account name, access point, authentification type, user's name and password.

3. If desired to create a new data account, select "Create" via option, input account setting parameters, and click "Save".

4. If desired to re-edit the data account, select "Edit" via option, input account setting parameters and click "Save".

Reset Settings

If at partial recovery of default settings, the default preset parameter settings are restored only when the phone leaves the factory and the user-created file info, such as contacts, message and file massage will be reserved. If at complete recovery of default settings when the phone leaves the factory, the user-created file info, such as contacts, message and file massage and so on will be deleted. Note: you may lose the existing contents at original purchase.

1. Operation path: Main menu > Settings > Reset settings > Restore specific /Restore all.

2. Input the phone password. The original password of the phone is 0000 when the phone leaves the factory.

3. Click the OK to determine the operation.

4. After the phone is reset, it will return to the stand-by window.

Flight mode

Radio frequency(RF) will disturb the electronic equipment, when you are in following condition, please turn on " Flight mode " ,turn off all the function which related with radio, for instance: hospital, oil station and plane, and so on.

Operation path: Main menu>Settings> Flight mode.

FAQs and Troubleshooting Solution

Please carry on the following straightforward check prior to contact with a professional post-sale service in order to save your time and unnecessary expenses.

The phone cannot be started up
- Check whether the power key is pressed and held continuously.
- Check whether the battery is contacted well or not. Please firstly remove the battery and refit it, then re-power on the device.
- Check whether the battery is run out or not. Please recharge it.

There is a piece of info displayed upon powering on the phone
- Input the phone lock password: select a function of automatically locking the phone. The phone lock password must be input before using it.
- Input PIN: select a function of inputting PIN upon powering on the device each time. The PIN must be input; (the PIN of USIM card should be input when firstly used the phone).
- Input PUK: input PIN wrongly in continually 3 times. The operator-supplied PUK must be input.

(U)SIM Card is Error
- (U)SIM card metal surface is contaminated. Wipe the (U)SIM card metal contacts with a piece of clean cloth.
- (U)SIM card is not installed. Install the (U)SIM card correctly according to User's Manual.
- (U)SIM card is damaged. Pease contact with your network service supplier.

The network cannot be accessed to
- Weak signal. Please move to a location of strong signal for a trial.
- Beyond the coverage of the network service supplier.
- (U)SIM card is invalid. Please contact with your network service supplier.

Cannot Dial Out

- Please confirm whether the dial key is pressed after the number is dialed.
- Please confirm whether the call is barred due to owned toll.
- Please confirm whether the (U)SIM card is valid or not.
- Please confirm whether the call restriction function is set up.
- Please confirm whether the fixed dial function is set up.

Bad call quality

- Check whether the volume is adjusted appropriately.

- Use the phone at the place where the receiving quality is not good, such as near to the building or in the basement where the radio wave cannot reach.
- Use the phone at the peak time, such as at the time of going on/off the duty, the channel is congested.

Contact cannot call you

- Please confirm that the phone is powered on and is uplinked with network;
- Please confirm that the call is barred because of owned toll;
- Please confirm whether the (U)SIM card is valid;
- Please confirm whether the fixed dial function is set up;

Contact cannot hear you

- Please confirm that the microphone is opened.
- Please keep the microphone at the bottom of the phone close to your mouth.

Short standby time

- The stand-by time is relevant to the system setup. The phone is possibly at the place where the signal state is bad. When the phone cannot receive the signal, the phone will transmit to search the base station continuously; consuming a great deal of battery capacity and shortening the stand-by time of the battery. Please move to the place where the

signal is strong to use the phone or temporarily power the phone off.
- The battery requires to be displaced with a new battery.

Cannot charge
- Bad contact! Please check that the plug is connected well.
- Wipe the interfaces of the phone and battery with soft and dry clothing.
- Please change the charging environment when charge at the environment below 0℃ or beyond 40℃.
- The battery or adapter is damaged and requires to be replaced.

Please record the phone model and SN, authorized or insurance information and detailed statement and then contact with the local after sales servicer if the aforementioned instruction cannot facilitate you to conquer these problems.

Health & Safety Information

RF/SAR Information

Your phone is a low-energy wireless receiver. Upon powering it on, the phone will emit a low-level radio frequency (RF).

All governments around the world use the national safety directives framed by specialized scientific organizations, such as ICNIRP and IEEE. These directives have established an approved level of radio waves exposure to common population. The approved level includes any metrological deviation, such as age and health levels, providing a guarantee within a safe range for human being.

The specific absorption rate (SAR) is a measurement unit of body-absorbed wireless wave quantity when the phone is used. The SAR value is instituted according to the highest energy level validated in the lab status. The true SAR level when the phone is operated will be far lower than this level. The nearer the phone is from a base station, the lower is the energy emitted by the phone.

The SAR levels of different models of phones will vary possibly. In order to ensure the subscriber safe and healthful, the phone is designed and manufactured by abiding by the *Wireless Exposure Directive*.

The SAR limit fit for the public radio wave is 2.0watt/kg (W/kg) per 10 body issues. After test, the phone conforms to this limit.

Battery

Do not use the damaged adapter or battery.

Please use the battery correctly, do not make the battery short circuit, or otherwise produced heat will cause the fire.

Prohibit putting the battery under an elevated temperature or into the fire, or otherwise the battery will explode.

Should return the waste battery to the supplier or place at the designated

recycling location, and should not discard with the life trash.

The battery charging time depends on the remained capacity, type and adapter. The battery may be charged for thousands of times, but will wear out gradually. Please purchases new battery when the standby time is shorter than the normal time obviously.

Please use the adapter and battery dedicated to or authorized for the phone.

Please disconnect the adapter and the power supply when the adapter is not used.

Please do not charge the battery for too long time, or otherwise damage the battery and shorten the service life of the battery.

Please cool or heat the battery to the normal temperature because the temperature extremes will affect recharging (because the lithium ion battery will be affected when the temperature is lower than 0℃).

Traffic Safety

The phone has a strong wireless voice communication function. With it, you can call at any time and any place, thus the subscriber shall undertake some important responsibilities.

To drive is your first duty when you are driving. Should be aware of answering the call and abide by the local regulations during the drive.

Understand the wireless phone and its function, such as speed dials and redial, which can help you to dial out conveniently without distraction during the drive.

Should use the hand-free device if there is and use any hand-free attachment currently-offered if possible to enhance the convenience and safety for the use of the wireless phone.

Place the wireless phone at an easy-to-find place. Do not distract from the road to sue the phone. Should use the voice mailbox as far as possible to answer the call if receiving a call at an inconvenient time.

Tell the caller that you are driving. If necessary, hang up during the traffic congestion and bad weather. It is dangerous in rainy, snowy, freeze, icy and traffic congestion situation.

Safety airbag, brake, speed control system and fuel injection system shall not be affected by the wireless transmission. Please contact with automobile

distributor in case of the above problems.

Please close your mobile phone when fuelling or at any place where the bidirectional wireless devices are prohibited using. Please do not place the phone together with the flammable and explosive articles because the internal sparkle can ignite.

Please close the mobile phone before the plane takes off. Be sure not use the phone during the flight in order to prevent the phone form disturbing the plane communication system. To use the phone before the plane takes off shall be approved by the screw members based on the safety regulation.

Please confirm that the phone alarm will not be opened automatically during the flight.

Operating Environment

Please abide by this regulation at any place. Please close the phone at place where the phone is prohibited using or the phone may cause the risks.

Should read the User's Manual; understand the security instruction when the phone is connected with other device. The phone is prohibited connecting with other incompatible devices.

The subscriber shall use the phone at the correct location (to the ear with the antenna pointing to top of the arm) in order to operate satisfactorily and protect your health.

Please use the phone at applicable temperature range －-10℃ to 55℃.

Electronic Apparatus

Most electronic devices shield the radio information. Please contact with the manufacturer for related information.

Pacemaker: keep the phone 6 inches (15cm) or above apart from the pacemaker; should not carry the phone in the chest pocket; answer the incoming call with the ear at the other side of the pacemaker to lower the possible disturbance. Please close the phone if you concern about the disturbance of the phone.

Hearing aid: partial digital wireless phones disturb the hearing aid possibly. Please contact with the hearing aid manufacturer in case of disturbance.

Other medical apparatus: please consult with manufacturer if you use other

personal medical apparatus in confirmation of wireless shield wave. The doctor may assist you obtaining the information. Please close the phone if the phone is prohibited using near the healthcare facilities.

Automobile device: please consult the manufacturer in confirmation of the information because the wireless signal may affect the electronic devices installed in the automobile.

Emergency Call

The phone uses the wireless signal similarly with other rope less phone and cannot be ensured to connect under all cases. Thus, the important calls should do not rely on the wireless phone only, in stance medical emergency call.

The phone shall be kept on with enough strong signals within the network coverage.

Please input the emergency call under the standby mode and then press the ⊟ key to dial out if you want to dial the emergency call.

Other Important Safety Information

- Please use the accessories of the original manufacturer or the accessories approved by the manufacturer. The usage of any unapproved accessory will affect the phone performance and damage the phone, even result in the human body risks.
- Please do not place your phone near to the magnetic memory medium such as PC disk. The phone may disturb the TV, radio, PC, thus affecting the call performance when using the phone near them.
- Do not connect the phone with other device not supporting the phone.
- The device is only maintained or the phone-related device is only installed in the automobile by the professional qualified personnel.

Repair &Maintenance

- This product is designed delicately and manufactured with hi-tech. Please use it cautiously. The following suggestions will help you use the phone happily in a long time.
- Do not let the kids or pets contact the phone, or otherwise cause kid's suffocation or damage the phone.

- Keep the phone dry, and avoid all types of liquids entering in interior of the phone so as to prevent against damage.
- Do not operate the phone with wet hands, or otherwise cause electric shock.
- Please do not store the phone under elevated temperature, or otherwise shorten the service life of the electronic apparatus, damage the battery and melt the accessories.
- Please do not store the phone under the low temperature. When the phone restores a normal operating temperature, the vapor will enter in the interior of the phone to damage the phone circuit board.
- Please do not expose your phone under the strong sunlight and avoid your phone being heated.
- Please do not place your phone near to flammable liquid and gas or explosive objects.
- Please do not throw and beat your phone. The cruelty to the phone will cause the damage of the internal circuit board.
- When cleaning the phone, please use wetter or static-proof cloth, but not dry or static-prone cloth. When cleaning the phone surface, do not use chemicals, such as detergents. Please power off the phone before cleaning it.
- Please do not paint your phone because the pigments will impede your phone from being used normally.
- If your phone has flash lamp, please do not get too close to the eyes and prevent the eye from hurting.
- If your phone or battery gets wet, the internal tags of the phone will be damaged. And post-sale agencies will not guarantee the quality assurance of the producers even within the guarantee period.

Declaration of Conformity

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

-- Reorient or relocate the receiving antenna.

-- Increase the separation between the equipment and receiver.

-- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference

(2) This device must accept any interference received, including interference that may cause undesired operation.

THIS MOBILE PHONE MEETS THE INTERNATIONAL RECOMMENDATIONS FOR EXPOSURE TO RADIO WAVES

Your mobile phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the limits for exposure to radio frequency (RF) energy defined by the international standards. These recommendations have been established by the International Commission on Non-Ionizing Radiation Protection (ICNIRP) and, the Institute of Electrical and Electronics Engineers (IEEE) that forecast a substantial safety margin for assuring the protection of

all persons, regardless of age and health.

The exposure recommendations for mobile phones use a measurement unit known as the Specific Absorption Rate (SAR). The SAR limit recommended by the ICNIRP for the mobile phones used by the general public is **2.0W/kg averaged over ten grams of tissue** and, is **1,6W/kg averaged over one gram of tissue** by IEEE Std 1528 for the head.

Tests for SAR have been conducted using recommended operating positions with the mobile phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR levels of the mobile phone while operating are generally below the maximum SAR value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a base station antenna, the lower the power output.

While there may be differences between the SAR levels of various phones and at various positions, they all meet the international protection standards for exposure to radio waves.

The highest SAR value for this model phone when tested was 1.13W/kg at ear and 0.693 W/kg for use close to the body..

For limiting the radio waves exposure, it is recommended to reduce the mobile phone call duration or to use a headset. The purpose of those precautions is to take the mobile phone away from the head and the body.

For body worn operation, this phone has been tested and meets FCC RF exposure guidelines when used whit an accessory that contains no metal and that positions the handset a minimum of 1.5cm from the body. Use of other accessories may not ensure compliance with FCC RF exposure guidelines.
